Senior Full Stack Developer

PROFESSIONAL SUMMARY

- Software Engineer with 5+ years of experience designing scalable Java, Spring Boot, React, AWS applications, aligning business requirements with production delivery and integration outcomes.
- Applies Generative AI, LLM platforms, OpenAI, and LangChain to create secure automation workflows, improve developer productivity, and support intelligent application experiences at enterprise scale.
- Engineers REST APIs, microservices, data models, and database schemas across SQL, MongoDB, and PostgreSQL, strengthening backend reliability, validation, debugging, and supportability for complex systems.
- Collaborates with product, frontend, QA, and business stakeholders through Agile delivery, CI/CD pipelines, code reviews, testing, documentation, and production troubleshooting for measurable outcomes.
- Utilized strong problem-solving skills to identify and address workflow inefficiencies, resulting in a 25 percent increase in team productivity and enhanced collaboration among departments to achieve project goals.
- Applied strong problem-solving skills and effective communication to resolve conflicts among team members, fostering a positive work environment that improved teamwork and led to successful project completions ahead of schedule.

TECHNICAL SKILLS

- **Languages** - Java 17, Python (Scripting & Automation), TypeScript, JavaScript, Node.js, SQL, PL/SQL.
- **Cloud & DevOps** - AWS (EC2, Lambda, S3, API Gateway, ECS, EKS), Azure AKS & Functions, Docker, Kubernetes, Jenkins, GitHub Actions, Helm, Terraform, Git, GitHub.
- **Testing & Quality** - JUnit 5, Mockito, Cypress, Jasmine, Karma, Jest, React Testing Library, Playwright, Test-Driven Development (TDD).
- **Frontend & UI** - React.js, Angular 10/16, Next.js, Redux, RxJS, HTML5, CSS3, SCSS, TailwindCSS, Bootstrap, React Query, webSockets.
- **Backend & Frameworks** - Spring Boot, Spring Cloud, Spring MVC, Spring Security, Hibernate, JPA, Microservices, webFlux, Spring Batch, Akka (Actors, Streams, Clustering)
- **Security** - OAuth2, JWT, AWS Cognito, Firebase Auth, Okta, SSO.
- **Methodologies & Practices** - Agile (Scrum), Waterfall, System Design, Domain-Driven Design (DDD), SOLID Principles, CI/CD Automation.
- **AI & Productivity Tools** - Cursor, Claude, GitHub Copilot, GPT models, RAG pipelines.
- **Messaging & Event Streaming** - Apache Kafka, RabbitMQ, AWS SQS, Event-Driven Architectures.
- **APIs & Integration** - RESTful APIs, GraphQL, JWT, Stripe, and OpenAI GPT Integration.
- **Databases & Storage** - PostgreSQL, MySQL, MongoDB, Oracle, Cassandra, Redis, Supabase, Firebase.

PROFESSIONAL EXPERIENCE

Amazon	January 2025 – Present
Sr. Full Stack Developer	Seattle, WA, USA
• Pioneered observability improvements that enhanced system integration and workflow optimization, leading to a 25% reduction in latency and a notable increase in operational scalability for distributed services. • Optimized security protocols within a high-traffic environment, strengthening compliance and hardening production systems against vulnerabilities, which resulted in a measurable decrease in security incidents and improved customer trust. • Spearheaded a comprehensive platform modernization initiative, eliminating 40+ weekly operational hours through automation, while significantly reducing deployment time and infrastructure overhead across multiple services. • Engineered a robust distributed system architecture that processed 20M+ daily transactions, enhancing performance and achieving 99.99% platform availability through advanced orchestration strategies and rigorous monitoring enhancements. • Architected Gen AI-enabled backend services with Spring Boot, AWS, and REST APIs, improving scalable catalog workflows, integration reliability, and production readiness for enterprise customers.	

- Designed React and TypeScript interfaces connected to Java microservices, improving user experience, accessibility, and secure data interaction across high-volume digital applications for enterprise users.
- Integrated OpenAI and LLM workflows with CI/CD pipelines, Docker, and Kubernetes, reducing manual toil while improving deployment consistency and operational resilience across cloud environments.
- Optimized SQL and MongoDB data access patterns for APIs, improving response performance, troubleshooting speed, and maintainability across distributed application services supporting complex transactions.

JPMorgan Chase

January 2024 – December 2024

Software Engineer

New York, NY, USA

- Established secure banking APIs with Java, Spring Boot, and REST services, improving financial transaction processing, audit readiness, compliance alignment, and integration stability across platforms.
- Standardized microservice authentication and authorization patterns with OAuth, JWT, and Spring Security, strengthening customer data protection for banking application workflows and secure integration delivery.
- Engineered SQL, PostgreSQL, and Kafka integrations for account and payment services, improving data consistency, event processing, reconciliation, and supportable operations across banking systems.
- Validated releases through JUnit, automated testing, code reviews, and CI/CD pipelines, reducing defects while improving banking platform reliability and traceability for regulated delivery cycles.

Infosys

May 2020 – July 2023

Software Developer

Hyderabad, India

- Engineered a robust full stack development framework that enhanced system responsiveness by 40%, ensuring seamless integration across microservices while optimizing resource allocation for increased operational efficiency.
- Revolutionized deployment strategies by implementing a sophisticated orchestration framework that improved reliability, achieving a consistent 99.99% uptime and enhancing the overall performance of critical applications.
- Analyzed application requirements and created Python services with Flask, REST APIs, and SQL, improving backend functionality, debugging efficiency, and maintainable delivery for clients.
- Automated data processing and validation workflows with Python, Pandas, and ETL methods, improving reporting accuracy, exception handling, and operational productivity across application teams.
- Configured Docker, Linux, Git, and Jenkins environments for application deployments, improving release repeatability, version control discipline, and production support across distributed project teams.
- Streamlined frontend enhancements with JavaScript, HTML, CSS, and responsive UI practices, improving usability, issue resolution, and collaboration with QA teams through Agile delivery cycles.

CERTIFICATIONS

- Microsoft Certified - Azure Fundamentals (AZ-900)

EDUCATION

- Master's in Computer Science - University of Dayton
- Bachelor's in Computer Science - Jawaharlal Nehru Technological University
